JOB TITLE: Projects Manager: Ecosystem Scientist

A rare and exciting opportunity for an environmental scientist and/or marine scientist/ecologist to drive the integrated solutions that will shape our future.

ABOUT THE COMPANY

Deborah Brosnan & Associates assists clients in private and other sectors to manage environmental, ecological and climate-change risks. We are on the front lines, driving solutions that build resilience and that add value to our clients, communities, and the environment globally.

The Company provides several services:

- high-level advising and due diligence expertise
- design solutions to environmental risks with a focus on nature based solutions and interventions
- integrate all aspects of environment into planning and permissions through EIA/ESIA
- implementation expertise that engages teams in field work, analyses, nature-based solutions, and other analysis as needed

The Company is a unique boutique consulting company, and a Woman Owned Small Business. The Company has offices in Washington D.C. and the Caribbean. The company focuses high-level and due diligence advising integrating nature-based solutions and climate risk; and the ESIA/EIA process- which it views as an opportunity to integrate science-based options across all aspects. The company is often the interlocutor between different sectors- including government, private and community.

Deborah Brosnan & Associates prides itself on providing a professional, ethical, science-based, and high-quality service that meets the needs of clients while helping to sustain the environment. Integrity, inclusion, respect, and trust-building are values that govern how the Company operates.

ROLE

The Projects Manager and Ecosystem Scientist is a role for a qualified individual who is professional, energetic, proactive, confident, client-oriented and driven to solve pressing problems. The individual can establish project needs, conduct field and desk-based work, and develop and successfully implement project plans including working with clients, internal resources, and third-party resources to deliver projects on time and on budget. The ideal candidate must enjoy working on a variety of projects and clients.

RESPONSIBILITIES AND EXPERIENCE

- Apply knowledge of ecosystems, marine processes, and climate-change risks on work that is centered around applying practical nature-forward solutions for tropical marine and coastal ecosystems including mangroves, coral reefs, sand dunes, and coastal vegetation.
- Conduct field and desk-top research, and contribute reporting including Environmental and Socio-Economic Impact Assessments

- Manage and internal and external consulting team: set project timelines; monitor team and project deliverables; and update relevant stakeholders the project progress
- Coordinate and communicate with high-end clients, governmental agencies and stakeholders
- Prepare reports and work plans
- Collecting, processing, and evaluating data
- Interpret permits and other environmental documents
- Ability to work across sectors with government officials, engineers, management teams, and high level clients is essential.

Most of this field work is based in the Caribbean region. The ideal candidate will be expected to travel in order to spend at least 25% of their time in the Caribbean. Due to the nature of the work and travel, from time to time, weekend work may be required, and the Company has a flex time policy to compensate for that time.

The Project Manager-Ecosystem Scientist is an energetic individual with a passion for finding solutions in the real world, in a fast –paced, high energy environment and comfortable with the uncertainty and ambiguity associated with innovative projects. The ideal candidate enjoys assembling and managing a team and working across sectors. They have ability to understand and interpret development plans, identify the information needed to assess the environmental needs, consequences and opportunities, to integrate and communicate environmental needs. The ideal candidate has the ambition and initiative to take on and seek opportunities, take ownership of and lead projects, and thrives in being part of a small entrepreneurial group, whose output and influence far exceeds its size.

IDEAL QUALITIES

- Professional – can represent the Company appropriately and at a high-level
- Dependable – strategically aware and capable of sound judgment
- Detail-oriented – can focus on the details required to complete the work
- Achievement-oriented – enjoys taking on challenges and delivering on them
- Communicative-communicates effectively with team members to accomplish project tasks and deliverables
- Team Leader – excels at leading teams and projects
- Autonomous/Independent – once the task is understood, enjoys working with little direction in order to complete it
- Adaptable-to changing environments and ability to be client-oriented

QUALIFICATIONS

- Master's degree in either ecological or marine science
- A minimum of five years of experience in project management, and direct experience in environmental projects and some in EIA/ESIA
- Proven track record working successfully with different skills esp. coastal engineering
- Experience in tropical coastal ecology, biology, and management
- Understanding of infrastructure and its interaction with ecosystems

1875 Connecticut Ave, NW
